When you first buy cryptocurrency, you are issued two keys: a public key, which works like an email address (meaning you can safely share it with others, allowing you to send or receive funds), and a private key, which is typically a string of letters and numbers (and which is not to be shared with anyone).

Coinbase is an exchange and electronic wallet for holding electronic currencies. Basically, you cant purchase Bitcoins or other digital assets if you dont have an encrypted wallet you can send it to. You can exchange your fiat money to various cryptocurrencies like Bitcoin or Ethereum so you can proceed with your desired purchase.
