June 7, 2019, 1:10 AM Cryptocurrencies without blockchain? It might sound impossible, but thanks to the DAG model, cryptocurrencies like IOTA, Nano, and Obyte are all built using DAG technology..

DAG technology is an alternative system that allows cryptocurrencies to function similarly to those that utilize blockchain technology without the need for blocks and miners. Lets take a quick look at a technical definition before we break it down. A DAG is a finite directed graph which does not have directed cycles.

Though DAG-based cryptocurrencies have been around for a few years, they have a long way to go before seeing widespread use. As such, it's difficult to predict what incentives users might have to exploit the system in the future. Closing thoughts. Directed Acyclic Graphs are certainly an interesting technology for building cryptocurrency networks.
