In the most basic sense, an AMM or automated market maker is basically a protocol, an algorithm, or a formula that helps in the pricing of assets. Rather than employing an order book model like traditional exchanges, the automated market maker algorithm helps in pricing the assets. Furthermore, you should also note that the formula for AMMs could differ for each protocol.

Automated market makers (AMMs) are a mechanism used by most decentralized exchanges to facilitate permissionless trading. AMMs make use of liquidity pools containing 2 or more assets, and prices are derived based on the proportion of each asset in that pool as well as the mathematical function used. Orders through an AMM are executed automatically via a smart contract that will calculate the trade prices algorithmically, including any slippage from the trade execution.
