TRC20-USDT refers to USDT issued on the TRON network, ERC20-USDT refers to USDT issued by Tether on the Ethereum network. The USDT issued on TRC20 and ERC20 are both identical, however fees to

transfer this USDT can often be cheaper on the Tron network using TRC20. Deposit addresses for these are always Ethereum addresses and these deposits / withdrawal transactions occur on the Ethereum network.

Difference in Three USDT Chain: OMNI, ERC20 and TRC20. daisy-support. When making a USDT transfer, many users are presented with a choice of three different chain types that are available, at which point users may face the situation that they don't know which chain type to choose when depositing and withdrawing.

USDT-ERC20 is the USDT issued by Tether based on the ETH network. Its deposit address is the ETH address, with deposits and withdrawals taking place on the ETH network. The protocol of USDT-ERC20 is the ERC20 protocol. USDT-TRON (TRC20) is the USDT issued by Tether based on the TRON network.

ERC20 is Ethereum network and usually it has high transfer fees, so I never prefer it unless totally necessary. TRC20 is TRON Network and its transfer fees is zero, in other words, it is free. So I always prefer this network in my Tether transfers. However not all the exchanges support the TRON Network. But beware !
