Arbitrage is the concept of buying and selling cryptocurrency simultaneously but on different markets. This is because of the potential profit possible due to the price difference between the markets. This is not some revolutionary new concept, but a very old one which is used in all markets.

Crypto arbitrage helps traders take advantage of the price difference by buying cryptocurrency from one exchange and selling it on another immediately. Cryptocurrency trading is quite difficult, and there are several risks involved, mainly due to the volatility of the crypto market. You never know when the prices may soar or dropdown.

A decentralized exchange is a cryptocurrency exchange where you can trade cryptocurrencies from your own wallet without trusting third parties. Decentralized exchanges are powered by smart contracts which allow users to trade cryptocurrencies directly with other users or through liquidity pools. Decentralized exchanges are non-custodial exchanges and based on smart contracts, so there is no need to trust a third party with your funds.
