Mining is the process that Bitcoin and several other cryptocurrencies use to generate new coins and verify new transactions. It involves vast, decentralized networks of computers around the world that verify and secure blockchains the virtual ledgers that document cryptocurrency transactions. In return for contributing their processing power, computers on the network are rewarded with new coins.

There are no anonymous exchanges that allow fiat deposits with bank wires or debit cards (credit cards). Some exchanges below allow trading with no KYC only for crypto payments. Binance is one of the best known exchanges and trading platforms in the crypto space. It offers anonymous trading, deposits and withdrawals without KYC for all users up to 0.06 BTC withdrawals per day.

Coinbase Mining more and more cryptocurrency pages are implementing browser mining on their sites to give users the chance to earn their first units of cryptocurrency. Browser mining involves creating digital currencies online via a browser. The advantage here is that the complicated setup for mining with a computer is eliminated so that even beginners have the chance to enter the world of cryptocurrencies.

Iv done it. Linked my Coinbase to Ethermine and have safely mined to it. Coinbase says not to do it because small transactions can overload their network but I dont think its much of a problem if your not getting 30 payouts a day. They do change addresses but every address is linked back to your account so it doesnt matter if it changes.
