Breeding two of your own cats together costs a flat rate of 0.04 ETH plus the transaction fee. Breeding with another player's Kitty costs the siring price set by that player, plus the 0.04 ETH breeding charge and the transaction fee. So, since players set the prices for siring and selling, players themselves largely determine the value of a Kitty.

A private key is like a password a string of letters and numbers that allows you to access and manage your crypto funds. When you first buy cryptocurrency, you are issued two keys: a public key, which works like an email address (meaning you can safely share it with others, allowing you to send or receive funds), and a private key, which is typically a string of letters and numbers (and which is not to be shared with anyone).

Iv done it. Linked my Coinbase to Ethermine and have safely mined to it. Coinbase says not to do it because small transactions can overload their network but I dont think its much of a problem if your not getting 30 payouts a day. They do change addresses but every address is linked back to your account so it doesnt matter if it changes.

Mining is the process that Bitcoin and several other cryptocurrencies use to generate new coins and verify new transactions. It involves vast, decentralized networks of computers around the world that verify and secure blockchains the virtual ledgers that document cryptocurrency transactions. In return for contributing their processing power, computers on the network are rewarded with new coins.

Sure, there are no issues in mining directly to your coinbase wallet address. However it is not recommended. Its not that coinbase dont recommend sending mining payouts to coinbase wallet. But because it is unreliable. At times due to heavy trading activities coinbase server goes offline and during such time your mining payouts may get lost.
