The worlds second-largest crypto exchange certainly showed resilience on the day of the Coinbase IPO. A reference price of \$250 per share had been set for the stock. When trading commenced on the Nasdaq, it surged to \$381 thats a 52% improvement. Coinbase IPO price estimates were difficult to make from there.

I use Interactive Brokers and RBC Direct Investing. On reasonably priced stocks (anything over \$3-5) I try to use IB. On bigger cap names I easily save more than \$0.01 per share by getting better fills. I use limit orders in both places, and IB gets a better fill price almost every time.
