The Grin blockchain has no addresses and doesn't store data about the amounts transferred. On the Grin network, a new block is generated every 60 seconds, and each has a grin mining reward of 60 grins. The network is set to generate 1 grin per second forever. This creates an increase in supply and a decrease in the inflation rate.

The country's central bank will provide its currency to another country's central bank in what's called a liquidity swap. The lending central bank uses its liquid state currency to buy the liquid state currency of another borrowing central bank at the market exchange rate. The lender then agrees to sell the borrower's currency back at a rate that also includes any interest accrued up to that point on the loan.
