The countrys central bank will provide its currency to another country's central bank in whats called a liquidity swap. The lending central bank uses its liquid state currency to buy the liquid state currency of another borrowing central bank at the market exchange rate. The lender then agrees to sell the borrower's currency back at a rate that also includes any interest accrued up to that point on the loan.

Crypto trading is, for many, a very emotional experience. The wild price moves can trigger a range of strong emotions. As extreme signals are easier to read, this could make existing AI models more suited to the crypto markets. This is something to hold in mind if you look to extract your crypto AI skills and apply them to other, more subdued markets.
